

# CONNECTIVITY

## NETWORK CONNECTIVITY, SECURE DATA TRANSPORT, BUSINESS ENABLEMENT SOLUTIONS

Hydro One Telecom (HOT) has been providing connectivity solutions across the province of Ontario for over 20 years. Whether your communications network goals are to build resilience, increase capacity or improve performance, HOT can help.

### WHY IT MATTERS

Every organization has different priorities for network connectivity. Some favour performance and security, others need flexibility and support, and others still require network and/or path diversity across multiple services and locations. Whatever your network connectivity objectives, HOT can address your requirements across a variety of solutions:

**High Performance** – through low-latency, high-bandwidth network connectivity, which enables the transfer of large amounts of data quickly and securely. HOT's MPLS, Ethernet and Wavelength services provide scalable, high-performance bandwidth for the most demanding workloads.

**Business Resilience** – through multi-layer, fault-tolerant network architecture, diverse path routing and innovative solutions that provide business agility—so your business can pivot quickly when circumstances change, while also continuing to support business operations in evolving conditions.

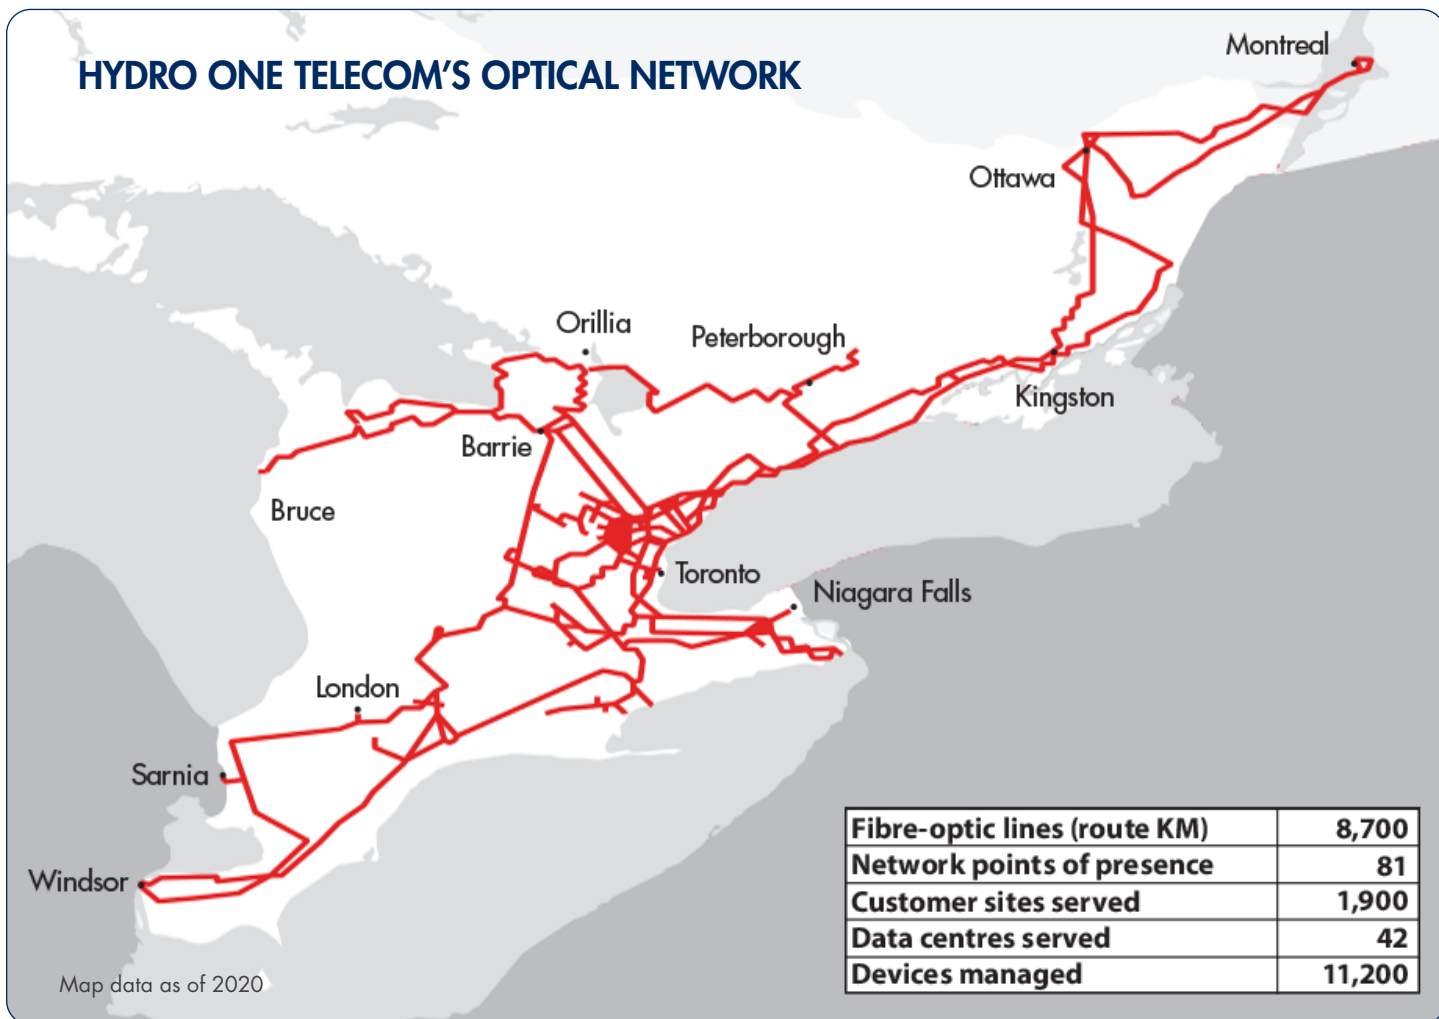

**Security** – through encryption, private line, and/or DDoS protection, HOT offers secure network connectivity for your sensitive data.

**Flexibility** – through network engineering, custom connectivity and innovative solutions. HOT's array of network services allows customers to select from a large range of bandwidth options, geographic path/route selections and physical interfaces.

**Support** – via HOT's world-class Client Engagement Centre, which offers concierge access to all of HOT's services and departments.

**Value Exchange** – across multiple services, so customers can take advantage of dedicated sales, engineering, technical support and service delivery teams as needed.

## HYDRO ONE TELECOM'S OPTICAL NETWORK

## HOW IT WORKS

HOT's Connectivity Services can expand your organization's network capacity and reach, with solutions that increase performance while reducing risk. Choose from a wide selection of scalable, high-performing network solutions, including Dark Fibre, Ethernet, Internet Transit, MPLS and Wavelength.

<b>Dark Fibre</b>	Secure, unlit transportation network services across Ontario
<b>Ethernet</b>	Scalable and flexible network services up to 100 Gbps
<b>Internet</b>	Connect your business to the Internet across multiple upstream interconnects. DDoS Shield can be added to this service to quickly and seamlessly protect against DDoS attacks.
<b>MPLS</b>	Business-grade network availability and infrastructure redundancy for the most demanding workloads
<b>Wavelength</b>	High-performance transport network connectivity across protected or unprotected circuits

HOT has an extensive fibre-optic network that spans more than 8,700 KM, which makes it possible for organizations to link facilities and offices in diverse or remote locations.
