

SECURE IT

A managed cybersecurity solution to protect against threats

Today's cybersecurity solutions go well beyond guarding networks with firewalls. The growth of public cloud computing and remote workforces are leading to concerns about security gaps, as workloads and employees migrate to off-site locations.

Acronym's Secure IT is a managed security solution designed to guard your network and entire IT infrastructure – including cloud resources and remote devices – from threats and attacks.

WHY IT MATTERS

The cost of cybercrime continues to grow. A study by IBM found it takes 280 days on average to find and contain the average data breach, and each breach costs organizations \$3.86 USD million in expenses and lost revenue.¹

Secure IT integrates seamlessly into any IT environment and provides a multi-layered strategy that can protect businesses of all sizes against attacks. Choose the layers of security that are most needed in your organization, or opt for our managed solution to protect all of your devices and users.

Outsourcing some or all of your cybersecurity operations delivers many benefits to your organization, including cost-savings and more complete protection. Our team of security experts will work for you at a fraction of the cost of building your own security team in-house.

HOW IT WORKS

Secure IT protects your organization from advanced threats by monitoring your operations 24/7/365 and then taking steps to remedy potential threats. We can manage all of your cybersecurity operations or act as an extension of your in-house cybersecurity team to look for anomalies and maintain network health.

GET COMPLETE DEVICE PROTECTION

CHOOSE YOUR PROTECTION

Secure IT Assess. We test your critical systems to find vulnerabilities that cyber attackers can exploit.

Secure IT Cyber Incident Response. Our cybersecurity team will quickly discover, isolate and contain active threats.

Secure IT Endpoint. Advanced managed solution that protects your servers, desktops, and laptops 24/7/365. Choose from different levels of protection, including Secure IT Endpoint Detection and Response (EDR).

Secure IT Firewall. Protect your network with next-generation firewalls. We'll monitor the firewalls 24/7/365 to identify potential threats.

Secure IT Mail. We'll upgrade your MS 356 with advanced email security enhancements to protect against malware and phishing threats. Choose from three packages that offer different levels of protection.

Secure IT SIEM. Security Information and Event Management (SIEM) is a sophisticated security platform that collects and analyses data about security threats to protect your organization.

Secure IT Switch. Securely connect devices within your network with our enterprise-grade switches. Powered by Cisco Meraki®, the cloud managed solution includes a robust feature set right out of the box.

Secure IT User Defense. Train and test your employees to be the first line of defense against cyberattacks.

Secure IT WiFi. A managed WiFi solution that protects your wireless networks 24/7/365. Includes hardware, software, configuration, and management.
